

# Inf1b Assignment Part I - Results 2020

This is a brief summary of the overall results for the first part of the assignment of the Inf1B coursework. This part is not for credit and marks are based on autograder results which run a set of unit tests checking correctness and robustness of submitted code.

## Participation

In total, 81.86 % of the registered students on the course have submitted code to the CodeGrade.

17.78 % of those submissions did not compile on their own or with the basic tests so they could not actually be tested. Without looking at each of those individually, it is difficult to say if they were a serious attempt or simply a test submission to try out CodeGrade access. (When putting your final grade together at the end of the course we will, of course, look at each submission individually!)

A participation rate which only considers submissions that compiled goes down to 67.3 %.

## Result Overview

The average auto test result is 56.58 % if considering all submissions and 67.74 % if only considering submissions that compile.

### Total result of the auto tests for all compiling submissions

```
plotResultHisto(resultData.accepted, TOTAL_SCORE, 2, 5)
```

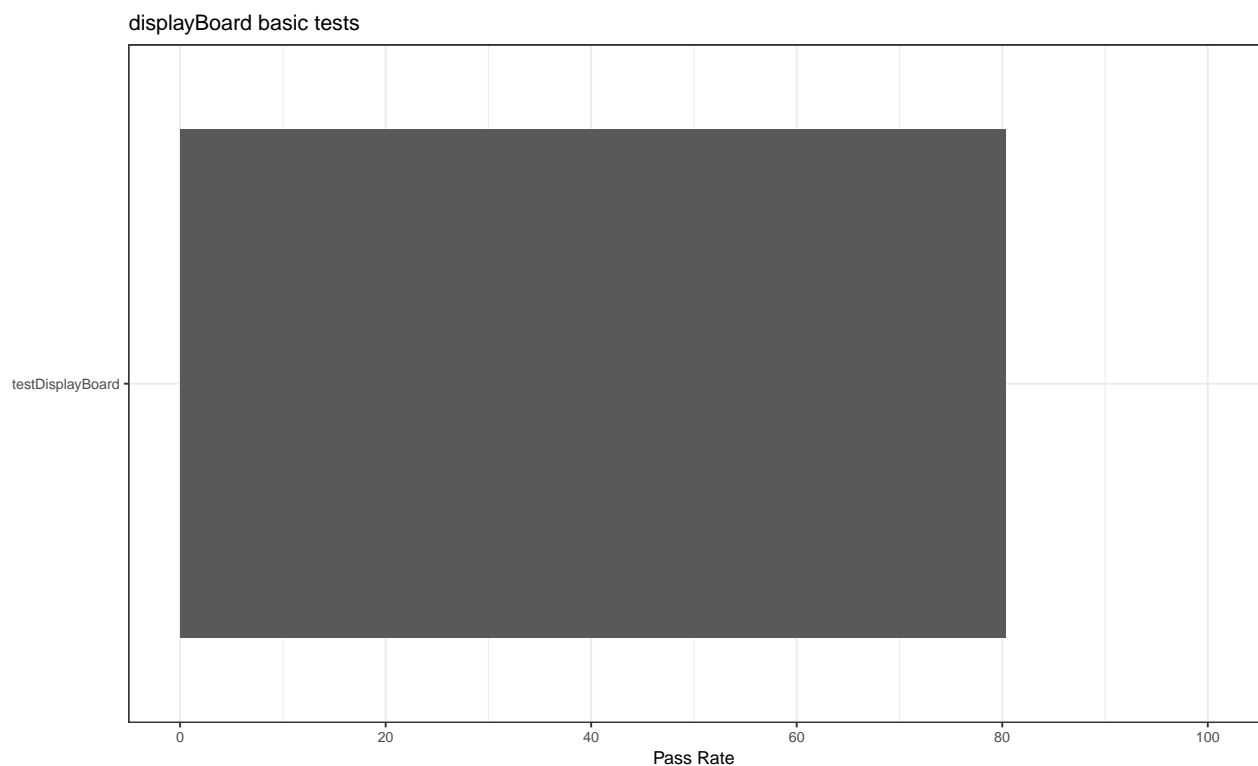

## General Advice

- For this part of the programming assignment, sample solutions and advanced unit tests are released together with this report.
- Review your results and ask any follow up questions you might have during the tutorials in the coming week. They are dedicated for exactly that! Make sure you bring your code as well as your error messages.
- For the coming assignments, start as early as possible to work on them so you can make continuous progress.
- Make sure you come to the lecture where new parts of the coursework are introduced so you can get a good overview.
- Future assignment will be for credit, so make sure you work on your own and don't share code or text with fellow students. Please review the policy about academic misconduct if in doubt.

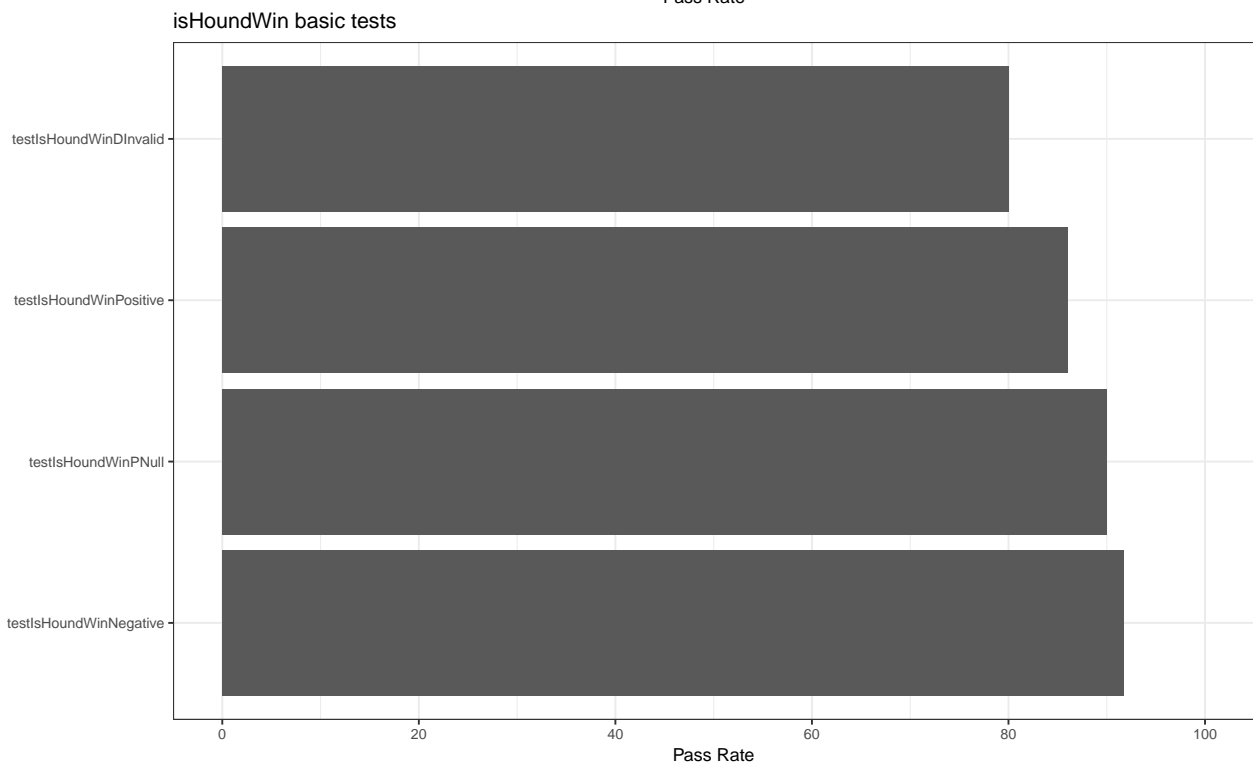

## Individual Test Overview

The following section will present the pass rate for individual tests across all submissions. This, of course, can only be done for submissions which actually executed the tests after they compiled successfully. Graphs are grouped by test function and test type (basic, advanced).

```
for (type in test.types) {  
  for (group in test.groups) {  
    plotTestBars(testData, group, type)  
  }  
}
```
